The Problem

Current methods for detecting hypoglycemia are inconsistent, expensive, and invasive.

Prevalence of
diabeties

Insulin treatments
are not perfect

Accessibility for
young kids

<https://www.diabetes.co.uk/insulin/diabetes-and-insulin-pens.html>

...

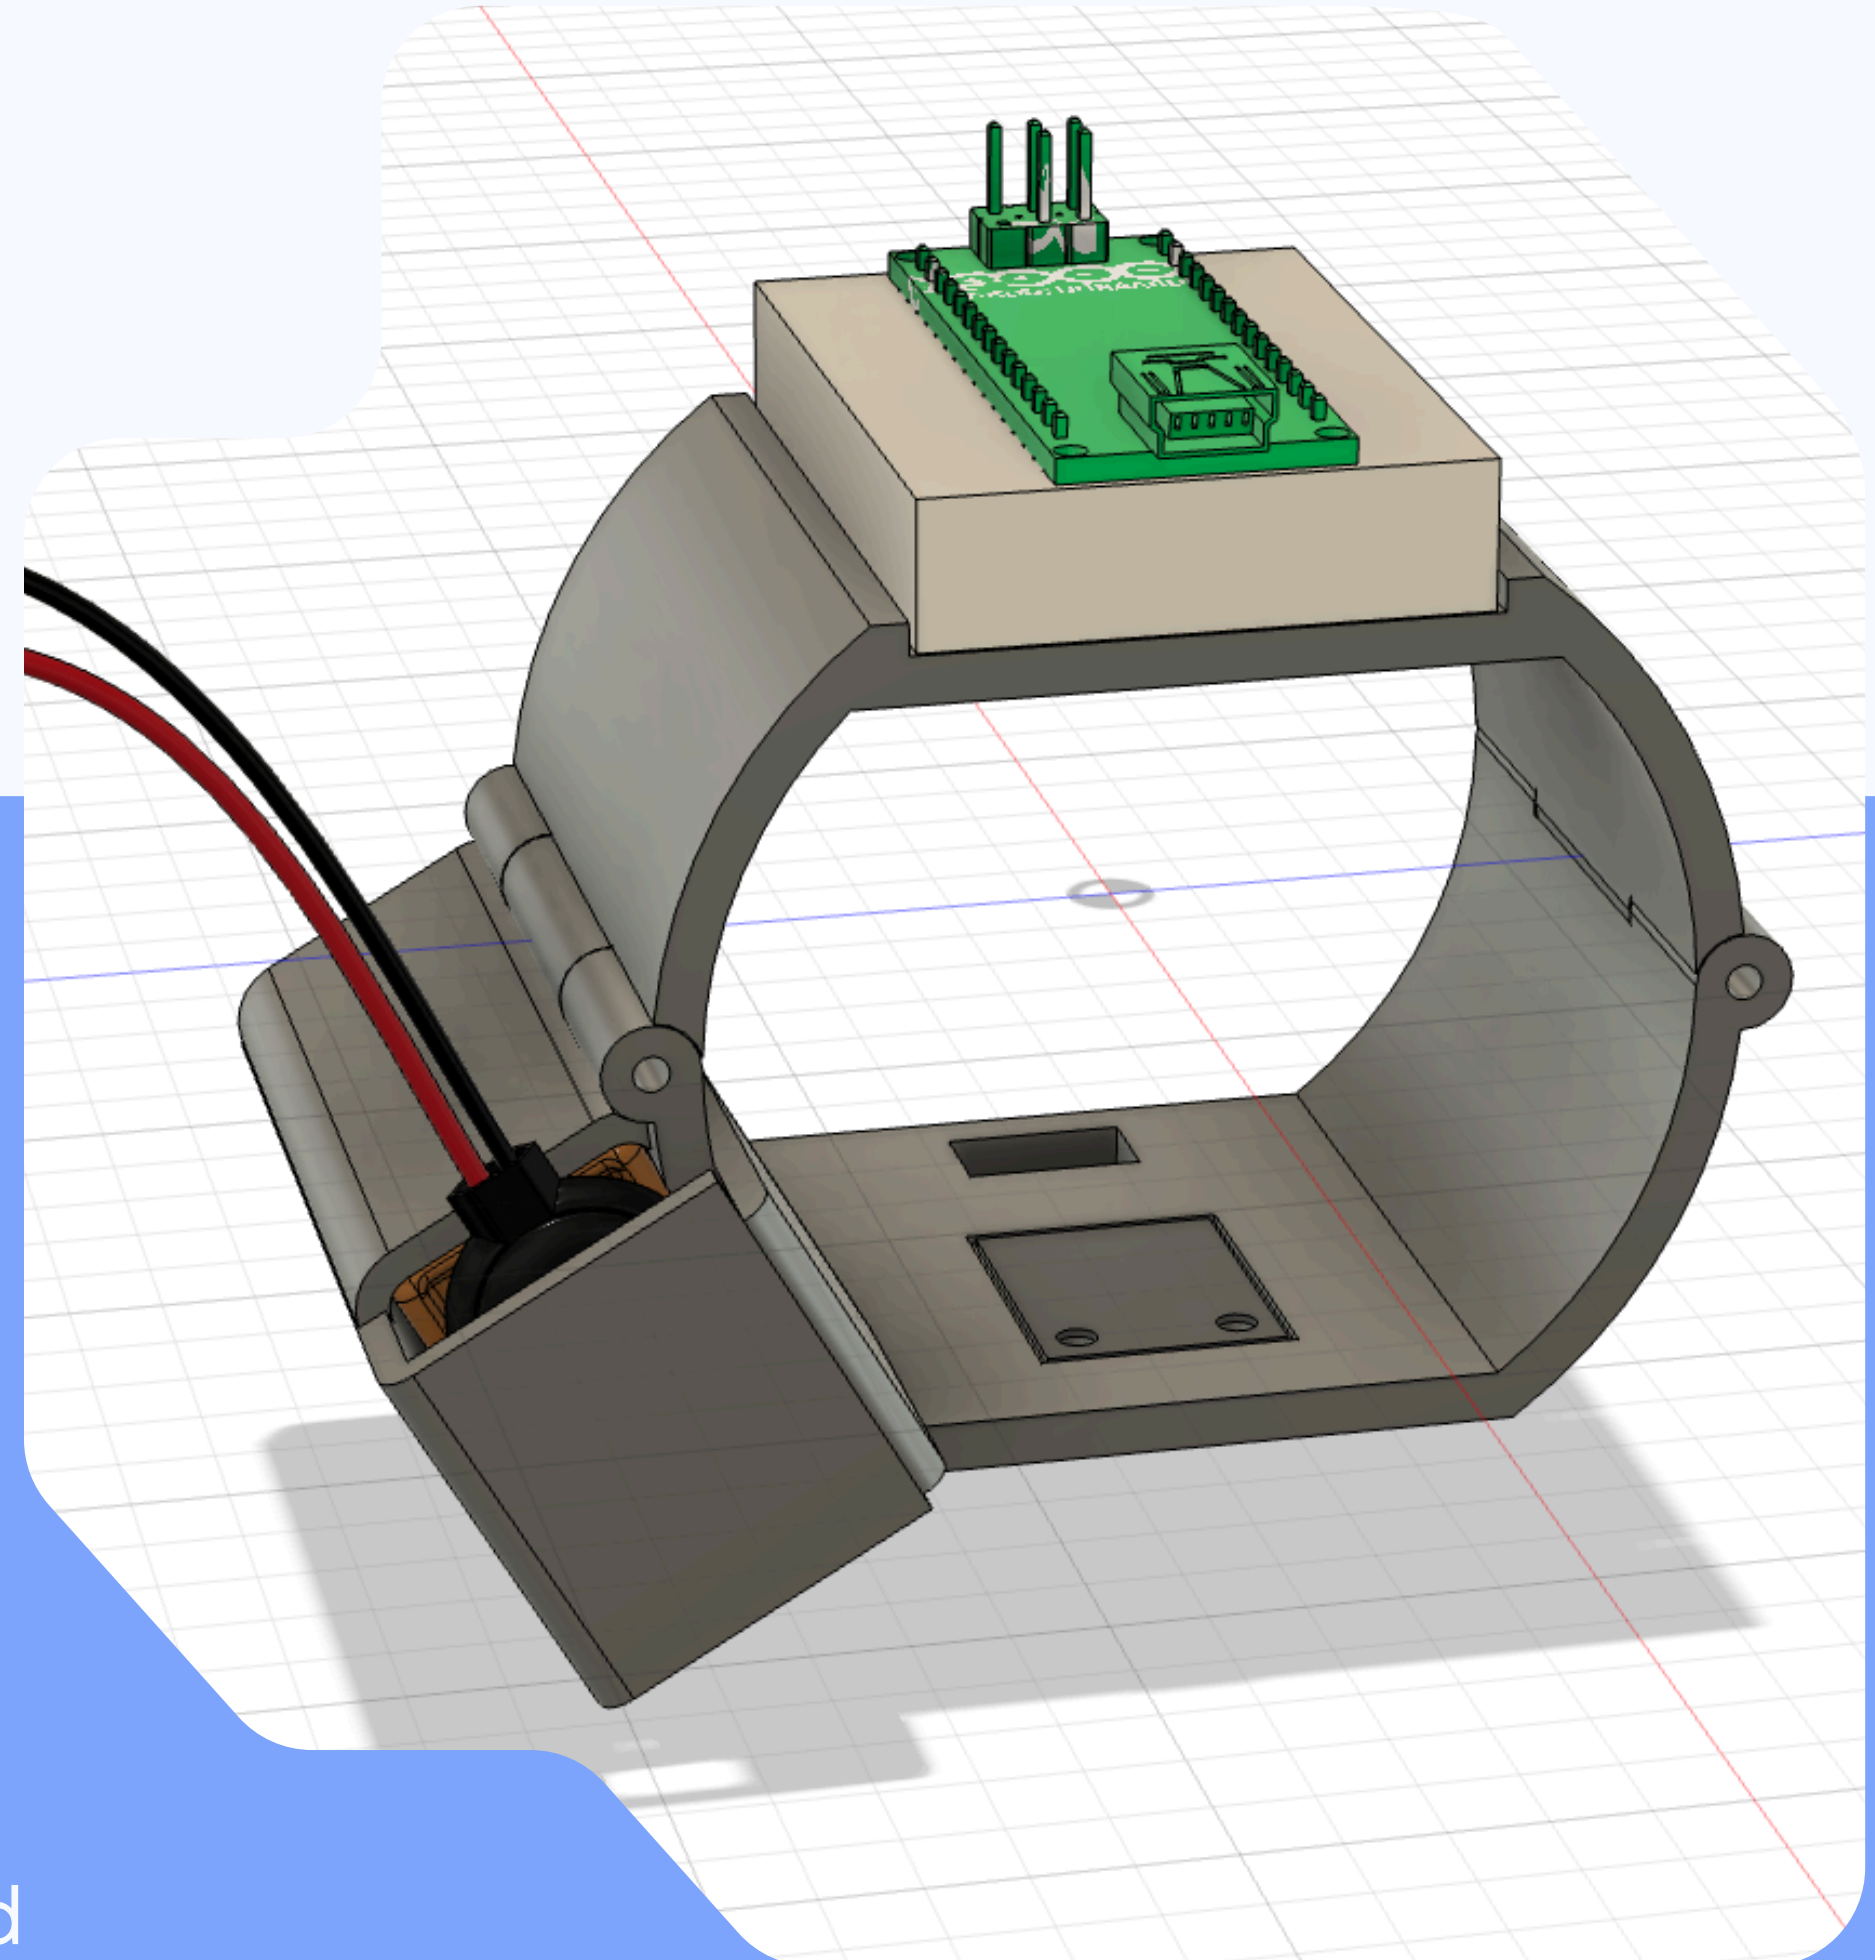

Our Solution

HypoAlert

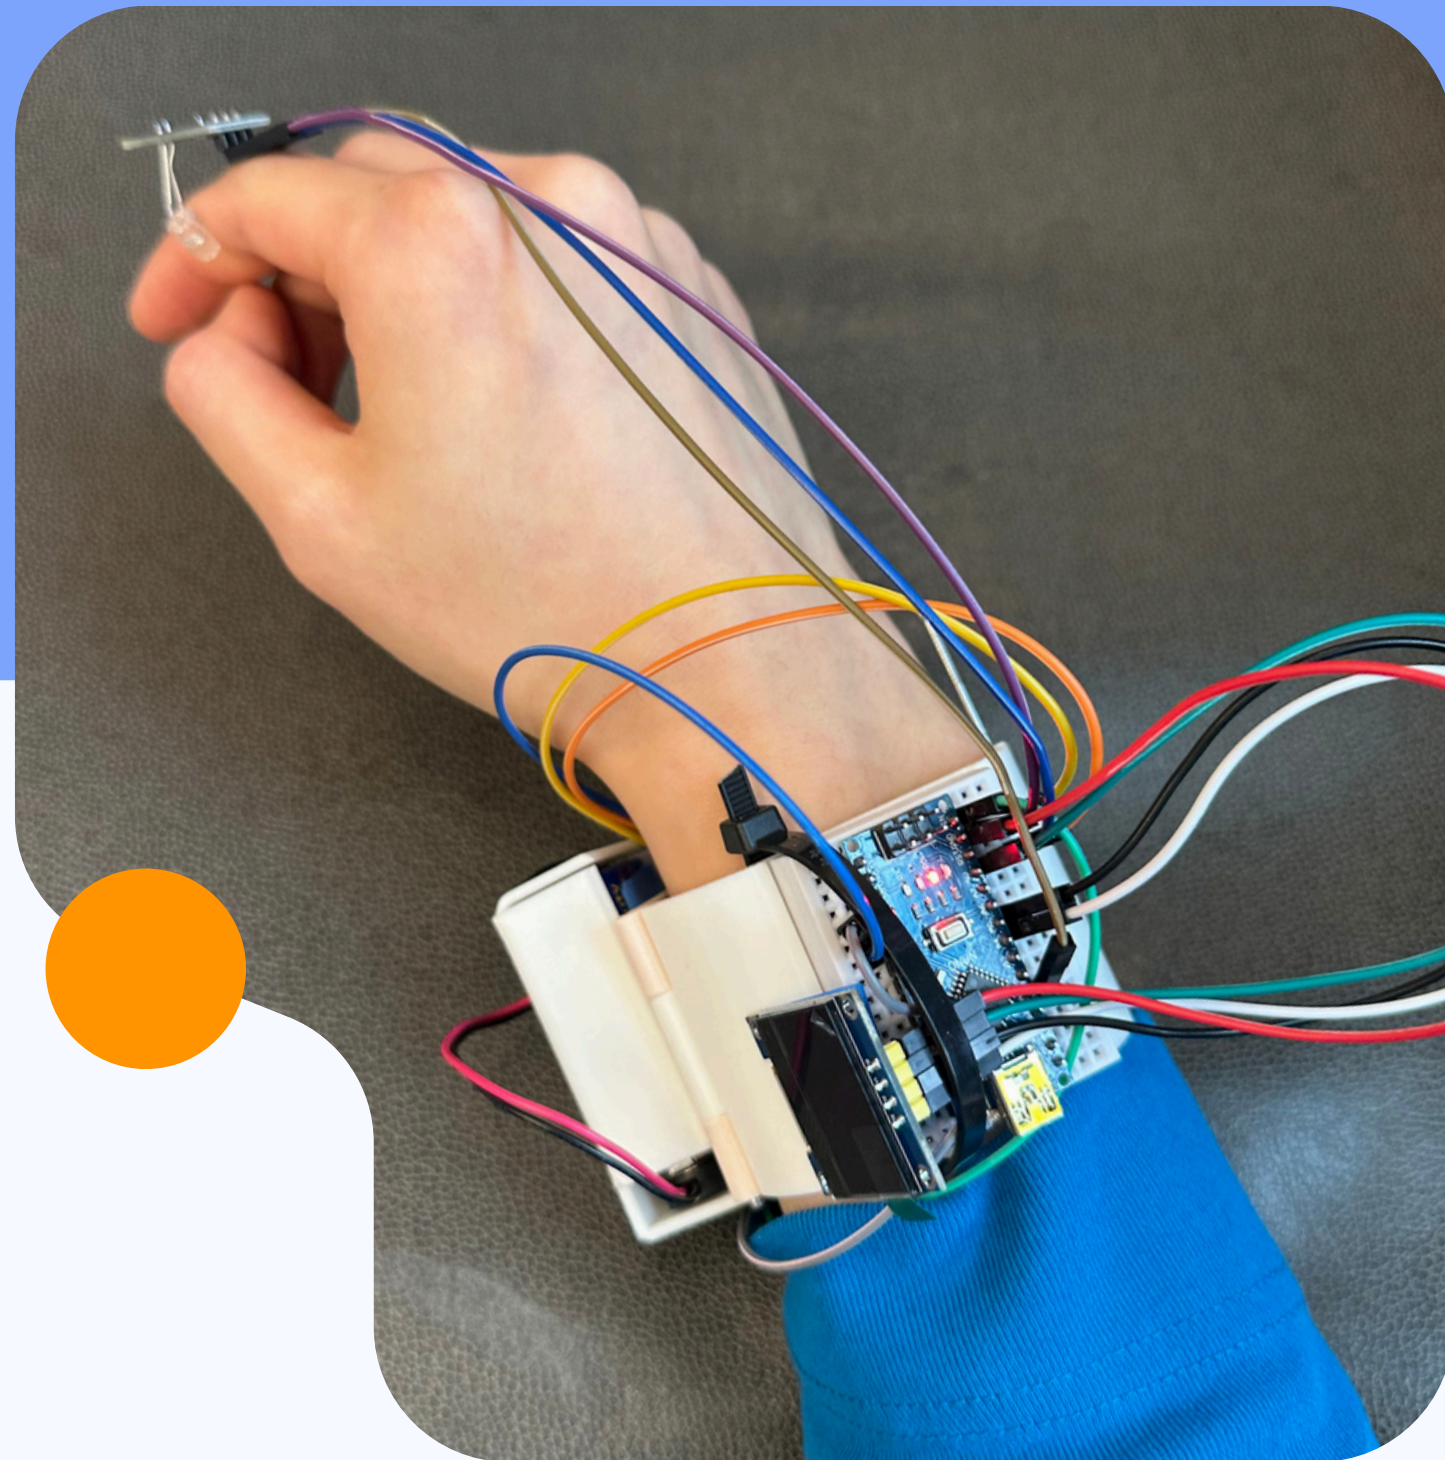

Features:

- Integrated sensors
 - Heartbeat
 - Temperature
 - Sweat
 - Tremors
- Light, non-invasive design
 - Easy-wear, lightweight cuff
 - Child-friendly clasp
- Real, constant data and feedback
 - Monitors 24/7
 - Gives alerts when changes are detected

Our MVP

HypoAlert

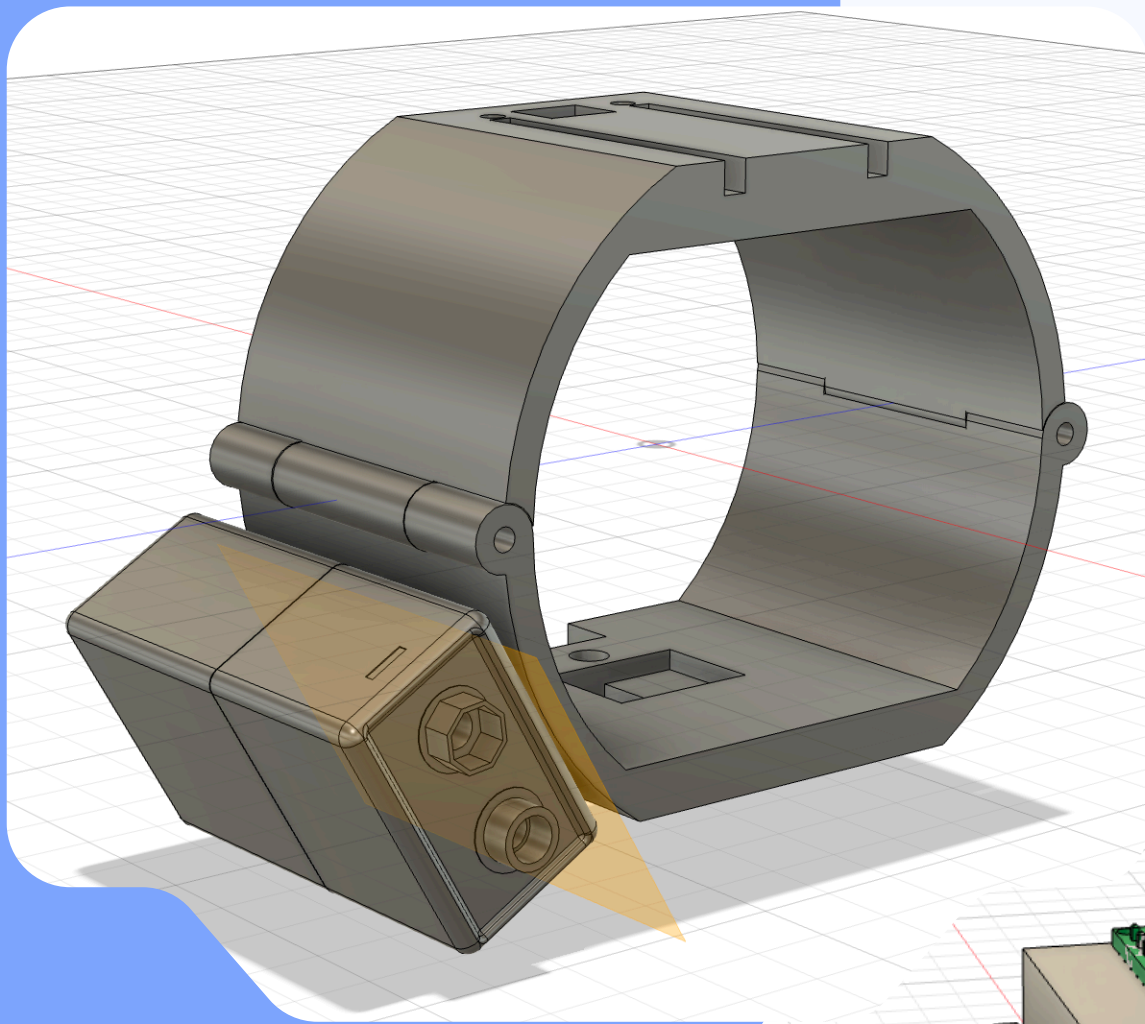

Easy-wear cuff with
hinge and latch

Heart rate and skin
temperature sensors

3D-printed wristband
with OLED display

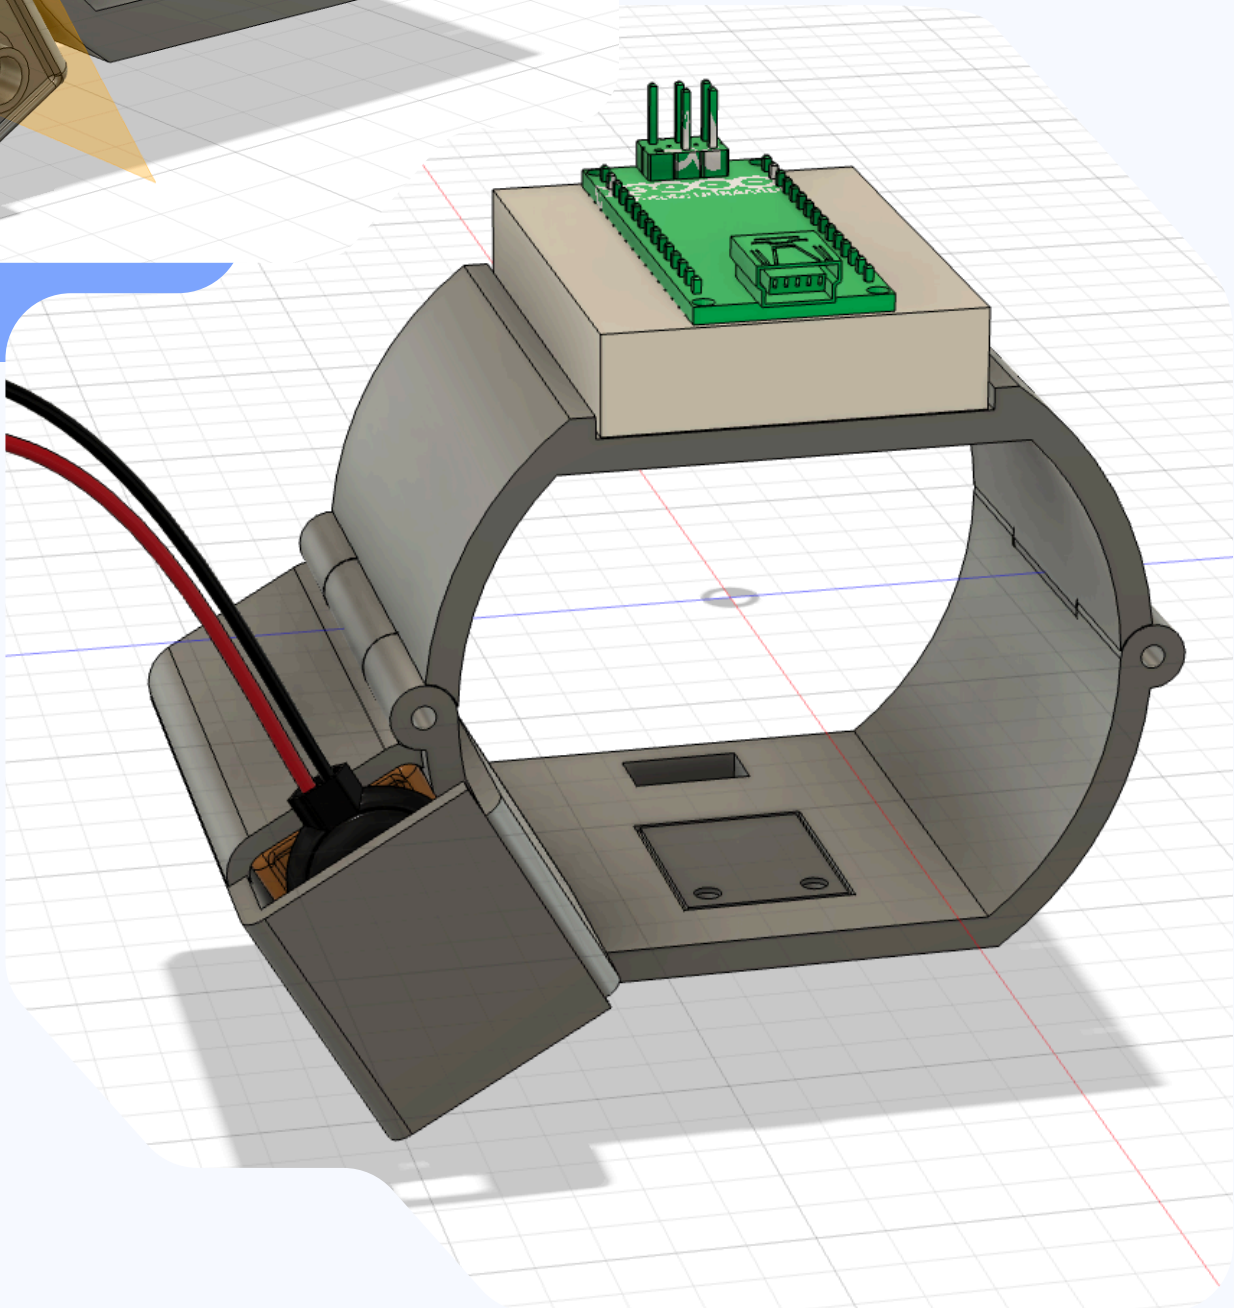

Initial Prototype

Easy-wear cuff with hinge and pin latch

Low-cost and non-invasive

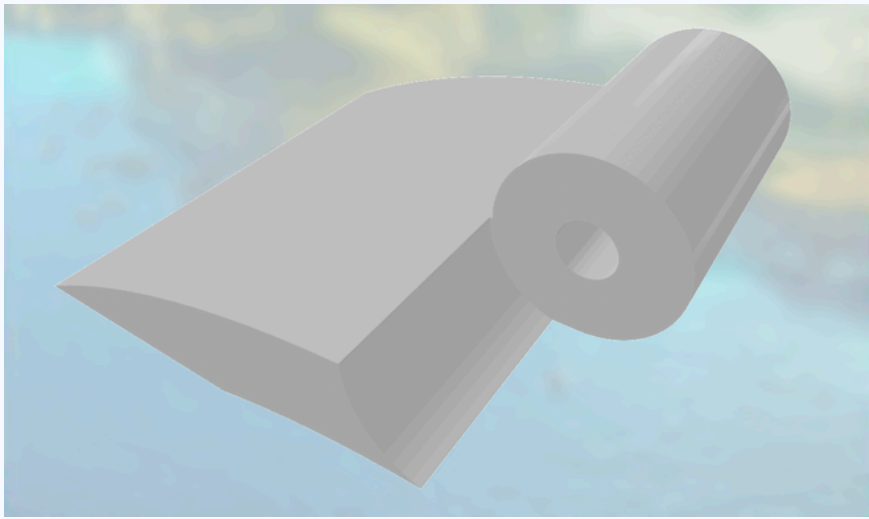

Detachable battery holder

Revised Design

...

Iterations

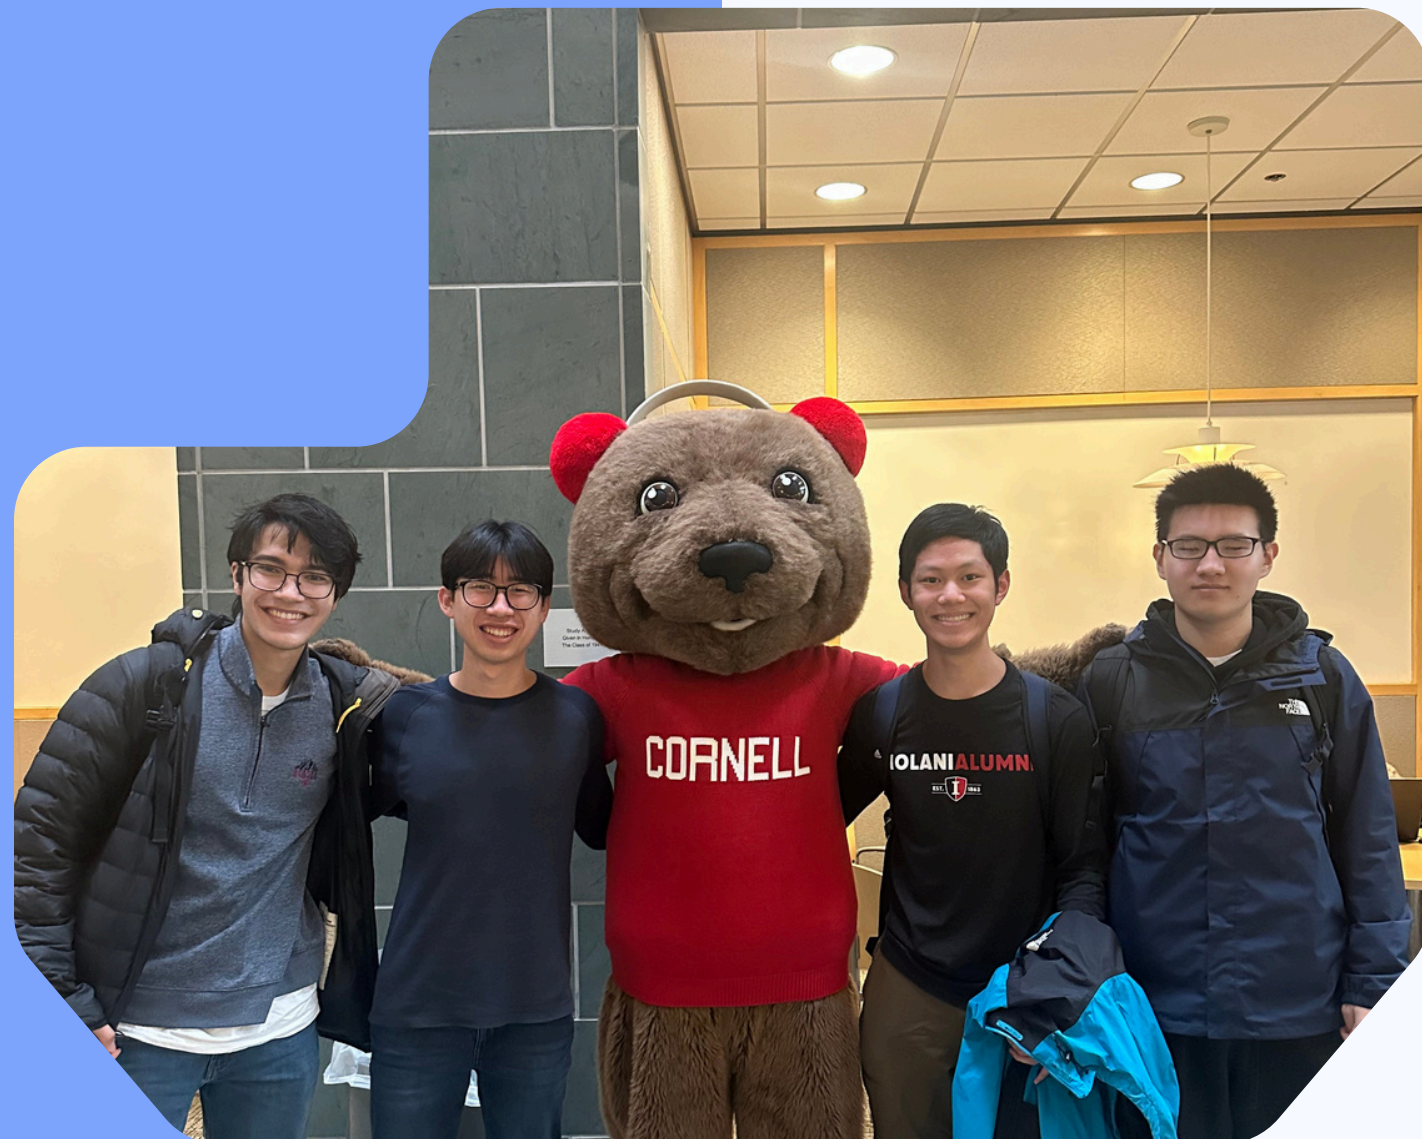

Increased warning
capabilities

Reduce false
positives

Affordability and
accessibility

Future Improvements

Thank you!
